

RELEVANCE

USER SERVICES

Securely deliver content through user/role-based management.

Multiple authentication techniques allows administrators to control access to terminals and applications.

AUTHENTICATION Allow users to identify themselves at any terminal using a standard login, and RFID proximity card, a USB flash key or a biometric security device. Greatly increase security by layering multiple authentication methods.

SECURE DELIVERY Relevance User Services can automatically deliver a user's content to any terminal they authenticate to. Allow programs to "follow" users throughout the entire plant. Even if content is already assigned to the terminal, Relevance User Services can deliver additional content, on the fly, based on the user's role. Terminal access and content can also be assigned at a group level.

SCHEDULE Limit a specific user to a weekly, daily or hourly schedule or disable the terminal itself at any time you choose.

EXTEND Drop the ActiveX control into your applications and you can program terminal and user specific functionality including session switching, event logging, and terminal status and management.

SAVE Preventing unauthorized access to your systems can prevent data theft and downtime

ACTIVE DIRECTORY All sessions require a Window's user account. Relevance User Services can automatically sync with your Active Directory allowing system admins to maintain user network security while allowing engineering and plant floor administrators to manage content delivery to the plant floor.
