DNS Configuration

Use the F1 button on any page of a ThinManager wizard to launch Help for that page.

Launch the **Domain Name Server Wizard** by selecting *Manage > DNS Configuration*. This will allow you to define the Domain Name Servers.

The Domain Name Service Wizard Introduction screen allows the use of a DNS.

- **System without a DNS server** - The default setting is for systems without a Domain Name Server.
- **System using a DNS server** - This setting allows use of a DNS. Select the *Next* button to launch the *Domain Name Service Configuration* screen.
Domain Name Server Configuration Page

The Domain Name Service Configuration page allows DNS settings to be configured.

Add DNS Server button will launch a dialog box that allows a DNS Server to be added to the list.

Remove DNS Server button will remove a highlighted DNS server from the list.

Up and Down arrow keys will change the order of DNS servers used. Highlight a DNS server in the list and select the appropriate arrow.

Domain is a field for the DNS domain name.

Search Domain will add the contents of the field as a prefix to any DNS searches.

Read DNS Setting from this computer will transfer the DNS settings from the current computer into ThinManager.

Add DNS Server button launches a DNS Server dialog box that allows the IP address of the DNS server to be entered.
**DNS Server Entry Window**

<table>
<thead>
<tr>
<th>Name Server</th>
<th>OK</th>
<th>Cancel</th>
</tr>
</thead>
<tbody>
<tr>
<td>255.255.255.255</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

*Domain Name Server Configuration - Add DNS Server*

**Name Server** – This field selects a DNS for use in ThinManager when the IP address of a DNS is entered and the OK button is selected.

Additional IP addresses can be listed by selecting the *Add DNS Server* button *Domain Name Service Configuration* page again.

Select the *Finish* button when the DNS configuration is done.
